At net mNAV 1.191, Strategy's STRC rotation adds net sats per share while STRC trades below $119.07; at 0.998, BitMine's BMNP rotation adds net ETH per share while BMNP trades above $99.79 (week ending 2026-10-11)

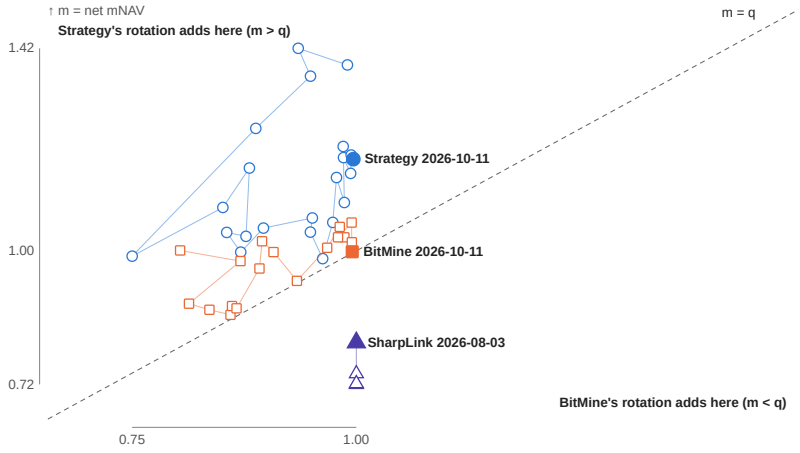

Firm	Week ending	Net mNAV m	Preferred close	Break-even ($100 × m)	Rotation adds while
Strategy	2026-10-11	1.191	STRC $99.65	$119.07	STRC below break-even
BitMine	2026-10-11	0.998	BMNP $99.53	$99.79	BMNP above break-even
SharpLink	2026-08-03 (last filed)	0.809	no preferred	m = 1	issuance while m > 1; buyback while m < 1

STRC closed at $99.65 on 2026-10-09 (q = 0.9965). BMNP closed at $99.53 on 2026-10-09 (q = 0.9953). SBET closed at $6.22 on 2026-08-03. SharpLink's filings state ETH holdings only on 2026-06-16, 2026-06-28, 2026-06-30, 2026-08-03.

Digital asset treasury (DAT) companies hold bitcoin or ether and raise money by selling stock. This memo measures each share sale, buyback and preferred trade since 2026-06-01 with Strategy's own net coins per share definition, applied to all three firms (glossary, Strategy's 2026-08-24 FWP). Net coins N are coins held plus USD assets, less out-of-the-money convertible debt and preferred notional, converted to coins at the coin price; n is N per fully diluted share. m is net mNAV, the share price over the net coin value per share. q is the preferred's close over its $100 notional.

Issuing common adds to n while m is above 1; retiring preferred adds while q is below 1. Strategy's rotation sells common and retires STRC, so it adds while m > q: it stops adding when STRC trades above $100 × m. BitMine's rotation sells BMNP and buys back common, so it adds while m < q: it stops adding when BMNP trades below $100 × m. SharpLink has no preferred, so no rotation line applies.

STRC closed below its break-even in 22 of 22 filed weeks, and BMNP closed below its break-even in 18 of 18. Strategy's rotation adds while STRC is below break-even; BitMine's adds while BMNP is above it. SharpLink's m was below 1 on 4 of 4 filed dates. Value to common since each firm's first week, by cause: filed actions +$406.3M for Strategy, −$50.7M for BitMine and +$10.9M for SharpLink. The residual, the change the filings leave unexplained, is −$255.9M for Strategy: −$257.4M before 2026-08-02, when the 8-Ks did not itemize cash flows, and +$1.5M in the weeks since, each checked against the filings. BitMine's is −$27.9M and SharpLink's −$19.2M, both report only.

Open marks: earlier weeks, joined in date order. Solid: latest, labeled. Circle Strategy, square BitMine, triangle SharpLink.

Closest weeks to the line: Strategy 2026-08-23, m 2.29% above q; BitMine 2026-10-11, m 0.27% above q. BitMine's estimated share count carries a known upward bias of up to 0.55% of S by 2026-10-11 (staked ETH costed as purchases), which raises m by the same proportion; removing it puts m at or below q in 1 of 18 BitMine weeks (2026-10-11), where BitMine's rotation would add.

Period: Strategy weeks ending 2026-05-31 to 2026-10-11 (22 filed dates, including the 2026-06-30 quarter-end holdings row); BitMine weeks ending 2026-06-14 to 2026-10-11 (18 weeks with a BMNP price; BMNP was issued 2026-06-10); SharpLink filed holdings dates 2026-06-16 to 2026-08-03 (4 dates; SharpLink states holdings only on those dates, and nothing is carried forward between them).

Sources: Strategy weekly 8-Ks and Q2 10-Q (EDGAR CIK 1050446); BitMine weekly 8-K releases and 10-Q (EDGAR CIK 1829311); SharpLink 8-K releases and Q2 10-Q (EDGAR CIK 1981535); Yahoo Finance daily closes for MSTR, STRC, STRK, STRF, STRD, BMNR, BMNP and SBET; CoinGecko BTC and ETH closes. Each week uses closes from the last US trading day on or before the week's end.

Labeled estimates: BitMine S is estimated between filings, anchored to the 10-Q share counts for 2026-05-31 and 2026-07-09, with unreported issuance estimated as the week's unexplained change in cash divided by the BMNR close. BitMine R is its stated cash and marketable securities, so it includes securities. The USD of each BitMine ETH purchase is units × that week's ETH close. SharpLink C includes LsETH and weETH at their stated as-if-redeemed ETH equivalence; its ETH change beyond stated purchases is inferred staking and LST accrual; its R is 2026-06-30 balance-sheet cash rolled by filed cash flows.
