At net mNAV 1.076, Strategy's STRC rotation adds net sats per share while STRC trades below $107.58; at 0.923, BitMine's BMNP rotation adds net ETH per share while BMNP trades above $92.33 (week ending 2026-10-18)

Firm	Week ending	Net mNAV m	Preferred close	Break-even ($100 × m)	Rotation adds while
Strategy	2026-10-18	1.076	STRC $97.72	$107.58	STRC below break-even
BitMine	2026-10-18	0.923	BMNP $96.66	$92.33	BMNP above break-even*
SharpLink	2026-08-03 (last filed)	0.809	no preferred	m = 1	issue if m > 1; buy back if m < 1

STRC closed at $97.72 on 2026-10-16 (q = 0.9772). BMNP closed at $96.66 on 2026-10-16 (q = 0.9666). SBET closed at $6.22 on 2026-08-03. SharpLink's filings state ETH holdings only on 2026-06-16, 2026-06-28, 2026-06-30, 2026-08-03. *BitMine's 2026-10-18 gap between m and q is within the S-estimate bias; see the note under the map.

Key. m, net mNAV: share price over net coin value per share. q: preferred close over its $100 notional. Net sats: net bitcoin per share in satoshis (100 million per BTC). Rotation: Strategy sells common and retires STRC; BitMine sells BMNP and buys back common. STRC: Strategy's perpetual preferred, $100 stated amount. BMNP: BitMine's 9.50% cumulative preferred, $100 liquidation preference.

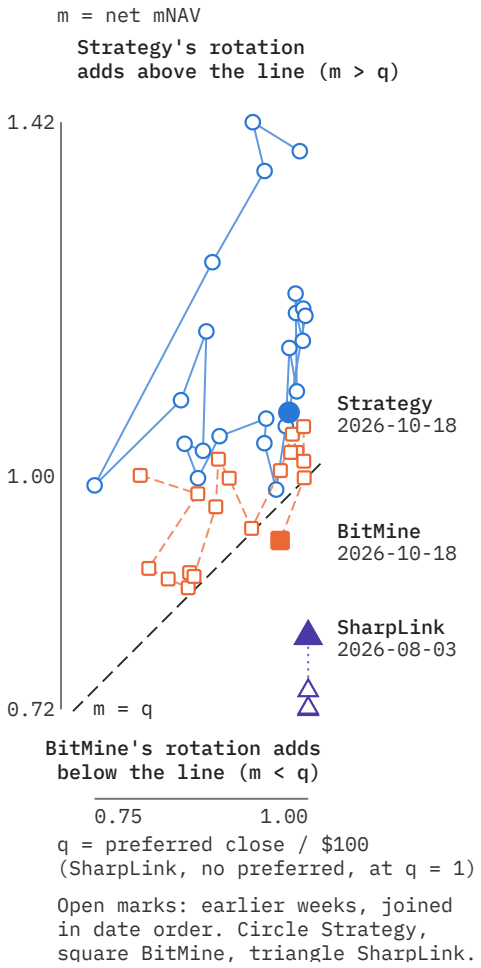

Digital asset treasury (DAT) companies hold bitcoin or ether and raise money by selling stock. This memo measures each share sale, buyback and preferred trade since 2026-06-01 with Strategy's own net coins per share definition, applied to all three firms (glossary, Strategy's 2026-08-24 free writing prospectus, FWP). Net coins N are coins held (C) plus USD assets (R), less out-of-the-money convertible debt and preferred notional, converted to coins at the coin price; n is N per fully diluted share, and S is that share count.

Issuing common adds to n while m is above 1; retiring preferred adds while q is below 1. So Strategy's rotation adds while m > q and stops adding when STRC trades above $100 × m; BitMine's adds while m < q and stops adding when BMNP trades below $100 × m. SharpLink has no preferred, so no rotation line applies.

STRC closed below its break-even in 23 of 23 filed weeks, and BMNP closed below its break-even in 18 of 19. SharpLink's m was below 1 on 4 of 4 filed dates.

Since first week	Strategy	BitMine	SharpLink
Coin price	+$2,286.0M	+$165.4M	−$9.1M
In-the-money flips	−$338.0M	−$9.0M	−$10.9M
Filed actions	+$410.9M	−$50.7M	+$10.9M
Estimated issuance	n/a	−$18.2M	n/a
Carry	−$400.8M	−$11.8M	+$5.6M
Residual	−$260.4M	−$27.9M	−$19.2M
Observed	**+$1,697.7M**	**+$47.8M**	**−$22.7M**

Value to common (change in n × S × coin price) by cause, summed from each firm's first week (Strategy and BitMine 2026-05-31, SharpLink 2026-06-16); the parts sum to the observed change before rounding. Strategy's residual is −$257.4M before 2026-08-02, when the 8-Ks did not itemize cash flows, and −$3.0M in the weeks since, which the R check tests against the filings. BitMine's and SharpLink's residuals are report only.

Closest weeks to the line: Strategy 2026-08-23, m 2.29% above q; BitMine 2026-10-11, m 0.27% above q. BitMine's estimated diluted share count S carries an upward bias of up to 0.59% of S by 2026-10-18 because its releases count staked ETH as purchased, which this memo costs as cash; the bias raises m by the same proportion, and removing it puts m at or below q in 2 of 19 BitMine weeks (2026-10-11, 2026-10-18), where BitMine's rotation would add.

Period: Strategy weeks ending 2026-05-31 to 2026-10-18 (23 filed dates, including the 2026-06-30 quarter-end holdings row); BitMine weeks ending 2026-06-14 to 2026-10-18 (19 weeks with a BMNP price; BMNP was issued 2026-06-10); SharpLink filed holdings dates 2026-06-16 to 2026-08-03 (4 dates; SharpLink states holdings only on those dates, and this memo carries nothing forward between them).

Sources: Strategy weekly 8-Ks and Q2 10-Q (EDGAR CIK 1050446); BitMine weekly 8-K releases and 10-Q (EDGAR CIK 1829311); SharpLink 8-K releases and Q2 10-Q (EDGAR CIK 1981535); Yahoo Finance daily closes for MSTR, STRC, STRK, STRF, STRD, BMNR, BMNP and SBET; CoinGecko BTC and ETH closes. Each week uses closes from the last US trading day on or before the week's end.

Labeled estimates: this memo estimates BitMine's diluted share count S between filings. It anchors S to the 10-Q share counts for 2026-05-31 and 2026-07-09 and estimates unreported issuance as the week's unexplained change in cash divided by the BMNR close. BitMine's USD assets R are its stated cash and marketable securities, so R includes securities. The USD of each BitMine ETH purchase is units × that week's ETH close. SharpLink's coins held C include the liquid staking tokens (LSTs) LsETH and weETH at their stated as-if-redeemed ETH equivalence; its ETH change beyond stated purchases is inferred staking and LST accrual; its R is 2026-06-30 balance-sheet cash rolled by filed cash flows.
